

SAP Intelligent Agriculture

One Platform for Intelligent & Sustainable Farming

SAP Intelligent Agriculture is a platform that enables data-driven farming operations and services for data management and processes using intelligent, executable recommendations to farmers and farm managers.

We Understand Your Challenges

Inefficient and ineffective processes and information that waste time, lack insights and precision, and create costly farm operations.

Too many natural resources are spent on farming operations, and those resources are becoming rare and more expensive.

Resilient farming against adverse weather events, shortages, price decrease, pests and regulatory changes is an industry priority.

Why SAP Intelligent Agriculture

Reduced costs for farm inputs and **increased crop yield** and quality leading to **greater profitability**.

Farming tasks and resource recommendations enable **efficient and sustainable** operations by **optimizing** and documenting the use of input resources.

Integration of intelligent data in the platform allows farmers to increase efficiency and adapt to change faster and quicker.

What makes msg global unique

Strategic Guidance

Tailored consulting services from agriculture SMEs & sustainability experts will maximize your ROI.

Technical Experts

Deep solution knowledge + ability to optimize performance, maintenance, and user experience.

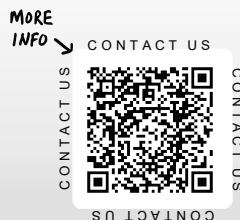

Dedicated Team

All we do is SAP, and have a proven track record delivering projects on time on budget with high client satisfaction.
